

# TAP

- In the US, tap water is just as clean as bottled water, and in a lot of cases is more strictly regulated by the government.
- Feelin' thirsty? Delicious water is conveniently available straight from the tap.
- And tap water doesn't cost extra. Boom.

# BOTTLE

- Lots of water comes in bottles. Try sparkling, mineral, distilled, and spring water next time you're out and about.
- Bottled water is a healthy thirst quencher anytime, anywhere.
- Taking your water in a reusable bottle to go will remind you to drink more water during the day.

# FILTERED

- Keep crisp, cool water ready at all times with a filtered water pitcher chillin' in the fridge.
- Activated carbon filters lots of stuff like dirt and chlorine out of water.
- There are many ways to filter water. Ask us to learn more.
